CRAWLER V2.0

## Open Source Intelligence RSS News Crawler for Microsoft Windows XP/Vista/7

Today's threats, whether to business or national security, are rapidly changing and geographically diffuse. Publicly available data can contain a wealth of valuable information. Whether your interest is in counter-terrorism, threatening organizations, organized crime, flash mobs, and/or business intelligence, the Internet is a living source of intelligence that can help you preempt and mitigate threats by leveraging information from public and unclassified sources.

Harnessing the power of aggregated open-source information can turbo-charge predictive, preventive, and investigative processes.

Nearly every internet resource provides a standards-based interface via RSS and/or ATOM. This interface allows for persistent monitoring of site content, even as people are posting and site content morphs in real time. Blueforce Crawler V2.0 mines RSS feeds for information using search terms that are important to your mission or intelligence requirement. Point Blueforce Crawler at Twitter, Facebook, newspapers, magazines, television, weblogs, or any other collection of information feeds that provide an RSS interface and the Crawler will mine, capture, and publish information that is important to you as an RSS "results" feed, or published to a Twitter feed for consumption on mobile devices.

### Key Features

- Crawler Profiles: Easy and flexible setup of multiple crawls with discrete feed publishing for each profile.
- Configurable Crawl Intervals: Manual trigger, or, set the timer interval for timed processing of profiles.
- All" and "Diff" Publishing: Every crawl publishes a feed of "all" hits, as well as a "diff" feed that publishes new items since the previous crawl.
- Multiple Consumption Methods: View results within Crawler, publish output using FTP, or push "diffs" to a public or private Twitter feed.

- Information Collection
- Open Source Intelligence (OSINT)
- Brand Monitoring
- Threat Feeds
- Business/Competitive Intelligence

### System Requirements

- Microsoft Windows XP, Vista, or WIN7
- 64MB RAM, 50MB of storage
- Internet connection, 56Kbps or higher
