

PRODUCT DATA SHEET

BLUEFORCE BEACON

Because everyone deserves executive protection™

Whether you are involved in executive protection, campus safety, or manage teams of mobile "lone workers", a fundamental requirement exists to keep track of people and to ensure their safety as they go about their day. BlueforceBEACON is a highly secure software-based emergency notification system that provides a safety net. The product delivers location services, secure text communications (1:1 and/or mass broadcast), checkin/checkout, covert emergency camera triggering, "listen live" capability, and provides situational awareness of end-user movement and position to include rapid deceleration using Blueforce's patented location and sensor fusion platform. Built for the enterprise, BlueforceBEACON endpoints can be monitored in your operations center and/or autonomously monitored where no personnel are required. SOS and panic notifications are sent using email, SMS, and the product can be extended to support the transmission of SOS's to third party monitoring providers. When BlueforceBEACON is used with Blueforce Web Command Center (WEBCC), users can be monitored by dispatchers in real-time on the WEBCC map with visual and audible alerts when a user triggers an SOS event.

USE CASES

- Visiting social workers
- Visiting nurses
- Delivery personnel
- Logistics
- Utility workers
- Lone oil & gas workers
- Executive protection

Real-Time Location

Latitude/longitude, sent to one or more BlueforceCOM-MAND or BlueforceEDGE endpoints at user defined intervals (default = 30 seconds).

Secure

End user access controls allows control over who has access to their location information. All information transmitted using military-grade encryption.

Panic Signaling

Overt, or covert: A simple swipe on the user interface or pulling the headphone jack out of the smartphone puts BlueforceBEACON into a panic state.

Encrypted Messaging

BlueforceBEACON users may exchange secure 1:1 text chat with one or more of the subscribed endpoints to send and receive emergency information and instructions.

Listen Live

When used with Blueforce Command Center, emergency staff may “listen live” to the endpoint in panic/SOS via a secure and full chain of custody audio stream.

Camera Autofire

BlueforceBEACON can be configured to send photos at a periodic interval from front and rear cameras and have the images sent to designated monitoring services.
