

BLUEFORCE SOLUTIONS FOR PROTECTIVE SERVICES DETAILS

Shared Situational Awareness and Sensor Fusion for your Protective Service Details

Close protection operations today are more demanding than ever. With increased mobility, teams are forced to work in varied locations, against highly dynamic threat profiles that can include harassment, theft, assault, kidnapping, and assassination. Additionally, protected assets have come to expect security teams to be less intrusive and adjust rapidly to their plans. Blueforce technology provides an added layer of mobility and awareness by providing secure communications, real-time personnel location and the ability to rapidly integrate diverse overt and covert sensors into the protection plan. Our BlueforceMOBILE Command Kit is a highly portable “command post” that stands up in minutes and can operate anywhere. The Blueforce product suite provides tactical and protective teams with advanced capabilities, enabling unprecedented situational awareness, and the ability to rapidly ingest relevant operational data to make better informed decisions faster.

Operational capabilities include...

- Securely share personnel location with support for geofences and more
- Physical disposition, motion, rapid deceleration, and direction of travel
- Hyperlocal messaging allows location specific mass broadcasts to get to the right people
- Selectable silent SOS/duress alarms allowing for focused response based on situation
- Extensible to include body worn sensors such as physiological and environmental
- Shared GIS points of interest for route planning, emergency evacuation sites, and more

BlueforceMOBILE Command Kit

Total tactical awareness of people, sensors, and services

The Blueforce product platform is the next generation mobile technology suite that embraces and extends the last tactical mile vertically, but also horizontally thereby allowing all members of a team, human, AI and platform, to be on the same page specific to real-time events and information using mobile edge compute devices like smartphones, tablets, and laptops.

Speed of Swarm

Blueforce enables "speed of swarm" through the "stand-up" and "tear-down" of secure human, command, and sensor networks.

Secure

Information security at rest and in transit using military grade FIPS 140-2 certified cryptography for authentication and encryption.

Sensor Sharing

People are more than a point on a map. Blueforce extends body worn sensors for shared biotelemetry, CBRN, signal, and PPE.

Information Sharing

Move information fast! Text and chat securely while sharing pictures, floor plans, and other collaborative data.

Extensible, Plug-in Platform

Blueforce provides a future proof plugin architecture which enables the ability to leverage both legacy and future IoT sensors..

Accountability

The Blueforce platform features full support for SOS/duress and includes "roll call", evacuation, and rapid deceleration events.
